

Commercial Container Enclosure Guide

PURPOSE:

Container enclosures help keep your property clean, organized and safe. They also allow our drivers easy access for efficient and reliable service.

GENERAL REQUIREMENTS:

- Enclosures should be large enough to fit the dumpster requested, with room for truck access.
- Gates must open a full 180° and remain clear of obstructions.
- Concrete pads are required for durability and stability.
- Enclosures must be accessible during service days. Keep gates unlocked or provide driver access.

CONSTRUCTION GUIDELINES:

- Use sturdy, weather-resistant materials such as wood fencing, masonry, or steel.
- Ensure posts are reinforced and anchored securely. Provide clear space in front of gates, at least 45 feet- for truck approach and pickup.

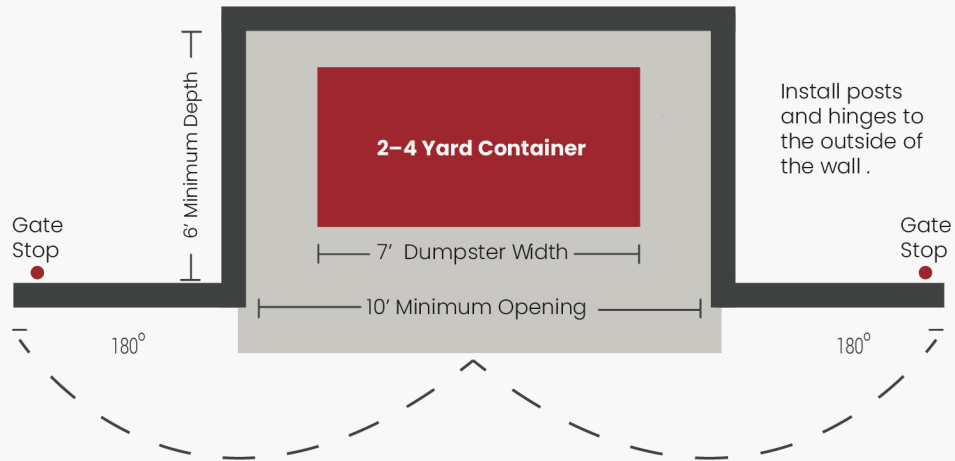

ADDITIONAL SUGGESTIONS:

- Have a 10-ft. concrete apron outside the enclosure (extending).
- Do not block or overload containers.
- Keep lids closed to prevent wind-blown debris and pests.
- Maintain regular cleaning and repairs to extend the life of your enclosure and improve property appearance.

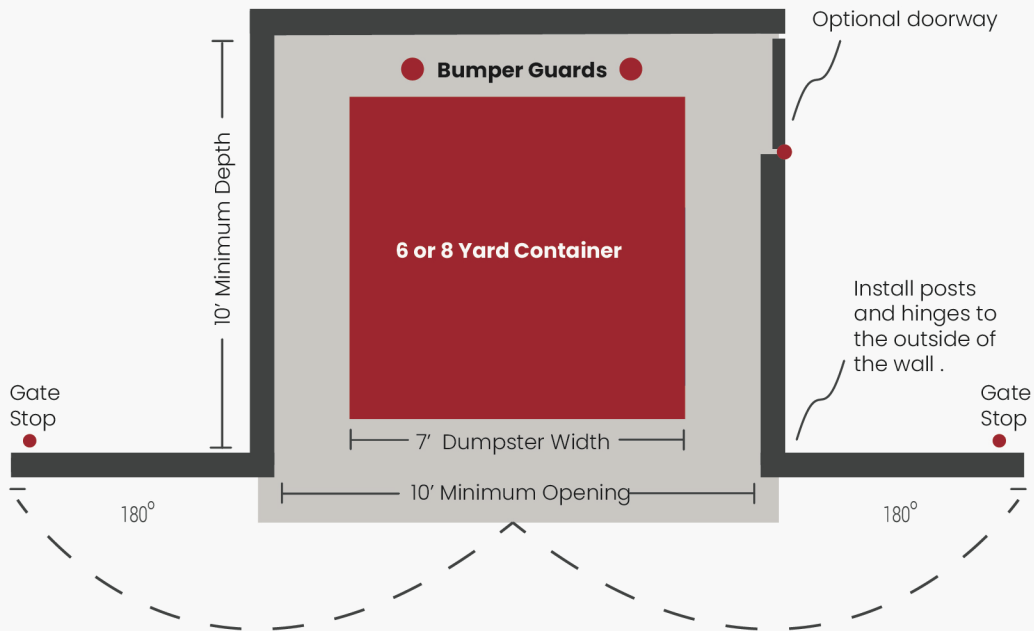

Commercial Container Enclosure Guide

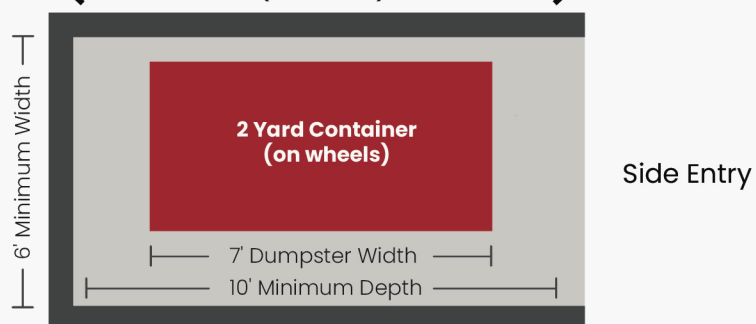

Minimum Enclosure Requirements 2-4 Yard Container

Minimum Enclosure Requirements 6 or 8 Yard Container

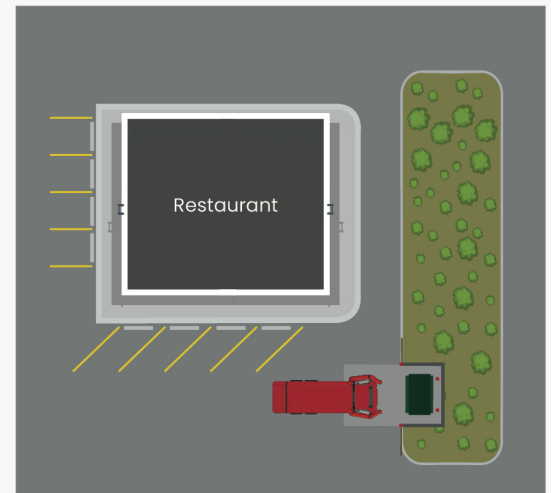

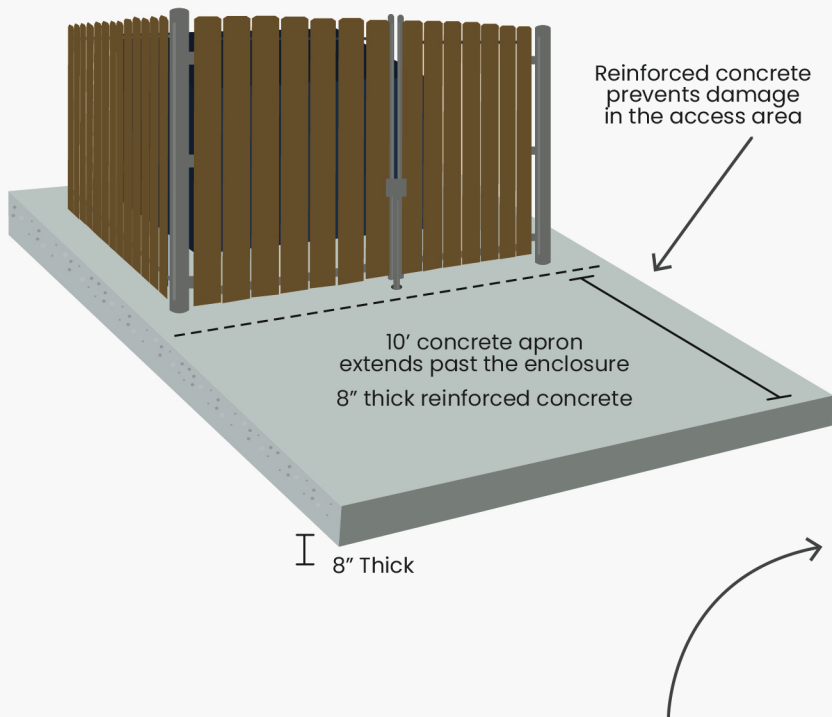

Minimum Enclosure Requirements up to 2 Yard Container (on wheels)

Commercial Container Enclosure Guide

The location of your container and your enclosure is an important decision. Garbage trucks require direct head-on access to your container. Garbage trucks cannot make tight turns.
